4) Relevance Table :-

Their Needs	My Skills	My Example
Mobile Engineer experience with Android	1 year of industry experience as an Android developer using Java.	I work on numerous new features and also reassess existing ones throughout the year.
Kotlin	With 7 months of experience using this language of the backend part.	I made two major projects during my bachelor's degree, and for both of them, I used Kotlin as the backend.
CICD pipeline	Get familiar with the CI/CD pipeline used during working at my previous company.	
Integrating 3rd party	I have used many third-party libraries in both my personal and professional experience.	I have used Retrofit, Glide, Picasso, and many others.
Debugging	Debug the code when experiencing unexpected crashes in the app.	I use two methods to debug code. The first is using "locat," and the second is breakpoints, as it is easy, fast, and convenient to do
Problem-Solving	View the problem as an opportunity, then break it into smaller pieces, and try to solve each piece individually.	
Communication and Interpersonal Skills	I am good at these skills, as I have to give a stand-up during my work at the company.	I received an award for the best presentation during my internship period.

5) Optimize App loading time

Problem: I encountered an issue in the app where it loaded the entire dataset every time a user logged in.

Solution: I implemented caching concepts to utilize local data until the new data from the server is loaded. As a result, the app is now almost 35% faster, providing a better user experience.
